

## SBI is releasing Version 7.33 tonight (Tuesday, January 18th)

Please see the [Release Notes](#) in the Client Tool for more information and support guides available in [Learning Center](#) for training assistance.

### Features

- [Customer Inventory Export Tool](#)
  - New Export module allows you to export your inventory list along with customer-specific information as an Excel file
  - This includes exporting a current availability, list of sales history, and/or the remaining Master Order quantities for a given customer, while including that customer's price and SKU-UPC Info (SKU, UPC, and Retail/Consumer Price)
  - This file can be imported back into SBI to update SKU-UPC info and/or create/update existing orders or release off Master Orders
- POS AD
  - [Fully supported allocation logic](#) now available within POS transactions. This follows the same logic as order processed through Backoffice, but can be overridden by users as needed
  - Options to set [statuses per line item](#) on an order to automatically split a sale when finalizing, separating items to be sold later into a new order while those to be sold now can be paid for and processed

Please see our updated [POS AD Tutorial](#) for application overview

### Fixes

- POS AD
  - Misc GL accuracy fixes
  - Error handling improvements
  - Transaction linking improvements
  - Allocation bug fixes

If you have questions, visit our [Live Chat](#) or create a case via the [Client Tool](#) and our support team will be right with you!

**Reminder:** Weekly maintenance windows are scheduled every Tuesday. Maintenance may occur between 6pm and Midnight local time. Total downtime is expected to be two hours or less.
