Desktop & Mobile Inventory Control App

Make quick work of your weekly availability with desktop & mobile inventory. See why SBI Customers double sales every 3-7 years. We have worked directly with growers for over 20 years to make this application what it is today.

Soon available in Spanish

Production Management

Developed hand in hand with growers resulting in an easy to use interface that makes sense. An Excel-like interface makes this the most efficient production application on the market. Forecast sales, pre-order inputs, execute production plantings/transplants, and roll right into availability. No other system on the market requires less daily labor.

Flow App to Manage Day to Day Operations

Assigning tasks to field teams, inventory moves, dumps, counts, and more. The TO DO list is the app. Users can go to their task list for the day and complete inventory changes without having to open another application.

Now in Spanish & Runs without internet

Online Orders

Test drive it yourself to learn why so many SBI customers are doing more than 50% of annual sales online. Online orders gives you an edge by allowing your customers to order off of live availability 24 hours a day. Our customers see 40% of orders come in after 8 PM during the Spring season.
